## Automatic Barrel Parts Loader

Line operators can suffer from fatigue and other work related injuries due to continuous lifting of heavy totes on a daily basis.

Our Automatic Barrel Parts Loader provides an automatic, safe and easy method to weigh, lift and dump part totes or baskets into your plating or finishing barrel eliminating this operation from the line operators' routine.

The system features a digital weigh scale for verification of the tote contents weight prior to loading. This information is useful in determining the proper rectifier setting during processing.

At the operators command, the Parts Loader will lift the totes off the scale and continue to move them into the discharge position where the tote contents are then directed through a stainless steel funnel into the processing barrel.

At the end of the dump cycle the totes will be returned to their original position for removal by the operator.

## Customization

Each unit is carefully designed to meet your specific requirements. Part Loaders can be configured for single or double barrels in various sizes.

## Features:

- Hydraulic Lift for Smooth Operation
- Adjustable Speed Flow Control
- Digital Scale(s)
- Compact Size
- Stainless Steel Funnels for Durability
- Easy to Operate
- Painted Steel Framework
- Optional 4-20 mA scale interface for use with existing computer controlled systems.

## Contact Us

For information on how a Parts Loader may work for your application simply **call our toll free number 800 887-8102** or email us and we will be happy to answer any questions.
