## Plating Equipment

Mesa West International, Inc. is a leading supplier of metal finishing equipment, systems and accessories for the plating industry.

Located in Southern California, Mesa West has been providing process equipment and systems for over 35 years.

Our experience in design and manufacturing allows us to provide anything from a single tank to a complete automated turnkey system.

## Manual Systems

From individual tanks to modular systems we can provide the right configuration to meet your specific requirements.

Pre-plumbed and pre-wired modules provide easy installation.

Heaters, controls, filtration and rectifiers are pre-installed and tested prior to shipment.

Systems include single point utility connections and integral exhaust ventilation.

## Automatic Systems

Mesa West automated process lines are custom engineered and built to suit your production requirements. Proven production control software manages the hoist system and provides an easy to use graphic user interface.

We offer Fixed Timeway operation for maximum throughput and Random scheduling software for maximum flexibility.

All our software is pre-installed and tested and we provide full training and support.

The Aries line of hoist transporters compliment the advanced capabilities of the computer control system.

High torque motors combined with encoder based positioning provides reliable performance with smooth acceleration/deceleration to eliminate part sway.

Several hoist models are available in 150, 250, 500 and 1000 lb. capacities.

## PC-6000 Control Software

The PC-6000 is an automation and control software system which can monitor and control a number of hoist transporters and tank devices. The control is accomplished through an Allen Bradley Control Logix PLC. The system includes a color touch-screen as the operator interface.

The PC-6000 is unique in that nearly all characteristics of your process can be user configured in the field including changes to process sequence, dwell times, drip times and device status.
